

II Joint Conference of the Belgian, Royal Spanish and Luxembourg Mathematical Societies
Logroño, June 6–8, 2016

A simple remark

Amador Martin-Pizarro

Several theories of pure fields or fields equipped with operators are simple, with non-forking described purely in terms of the algebraic independence of the structures in the expanded language. We will provide an abstract unifying approach, which covers in particular classical theories, such as differentially and difference closed fields, separably closed fields of finite imperfection degree as well as perfect PAC fields with bounded Galois group.
